

IS-CS1000
ClockSmart

**Portable & Fixed GSM Biometric
Time & Attendance**

Features

- Optical fingerprint scanner.
- 100 users or 1000-user version.
- 2850 event transaction log (100-user) or 4680 event log (1000-user.)
- All SMS management functions are in plain English.
- Real-time clock.
- Enrollment and management commands may be done from anywhere in the world by SMS and users enroll at the unit.
- 2 X 10A relays (for access control function.)
- SMS alerts to a maximum of 5 mobile numbers.
- Tamper Switch.
- Power fail and Battery low alerts.
- Web-based access for report generation.
- No local PC required.

The **ClockSmart** IS-CS1000 time-clocking system is remotely managed on the GSM network using SMS and GPRS. It is particularly suited to applications which require remote management eg. construction sites, farming applications, retail applications and many others.

All enrollment and management functions are implemented using SMSes with a secure password. The functions are all in plain English. The unit may be managed from a central server using GPRS. All the transactions are downloaded automatically to a server for web-based reporting to the user. This means that no on-site management computer is required.

The device has an integrated battery and battery charger making it ideal as a portable device.

Intelec Systems offer a range of top quality, unique and innovative products. We also offer a wide range of design services and with over 25 years of design experience, we can provide an ideal research, development and production centre.

Our products are also used by scientists and research institutes throughout the world.
